Value
anatomical structure development
cellular component assembly
cellular protein modification process
cytoskeleton organization
cellular amino acid metabolic process
reproduction
cell motility
locomotion
protein−containing complex assembly
vesicle−mediated transport
immune system process
transport
extracellular matrix organization
vacuolar transport
signal transduction
nucleobase−containing compound catabolic process
mitochondrion organization
lipid metabolic process
generation of precursor metabolites and energy
cell morphogenesis
embryo development
response to stress
catabolic process
cellular nitrogen compound metabolic process
cell differentiation
small molecule metabolic process
